

# Masergy SD-WAN On The Go

Easy secure remote access for your mobile workforce

Product Sheet: Managed SD-WAN Secure

Mobile workforces in a cloud-first world require secure remote access. Seamless connectivity and advanced cybersecurity protection are must-haves for employees whether they are accessing corporate data from their smartphone via LTE in the airport or public WiFi in the hotel or the coffee shop.

## Extend the corporate WAN to remote workers

For mobile knowledge workers needing secure access to corporate and cloud applications, Masergy's SD-WAN On the Go is a software-based solution delivering VPN connectivity with enhanced, cloud-native security powered by Fortinet®.

Masergy SD-WAN On The Go is a software agent that securely extends your corporate network via SSL and IPsec over the public internet to any authorized Windows, Mac, iOS, Android, and Linux device—enabling a SASE-based approach to secure your mobile workforce on both BYOD and corporate-owned devices.

For IT managers, Masergy SD-WAN On The Go empowers you to quickly deploy a pure software-based Work From Anywhere solution. Combine with Masergy SD-WAN Home hardware solutions to ensure every worker has secure remote access to your corporate WAN that is centrally managed from the cloud, with granular end-to-end analytics and detailed identity-based endpoint security.

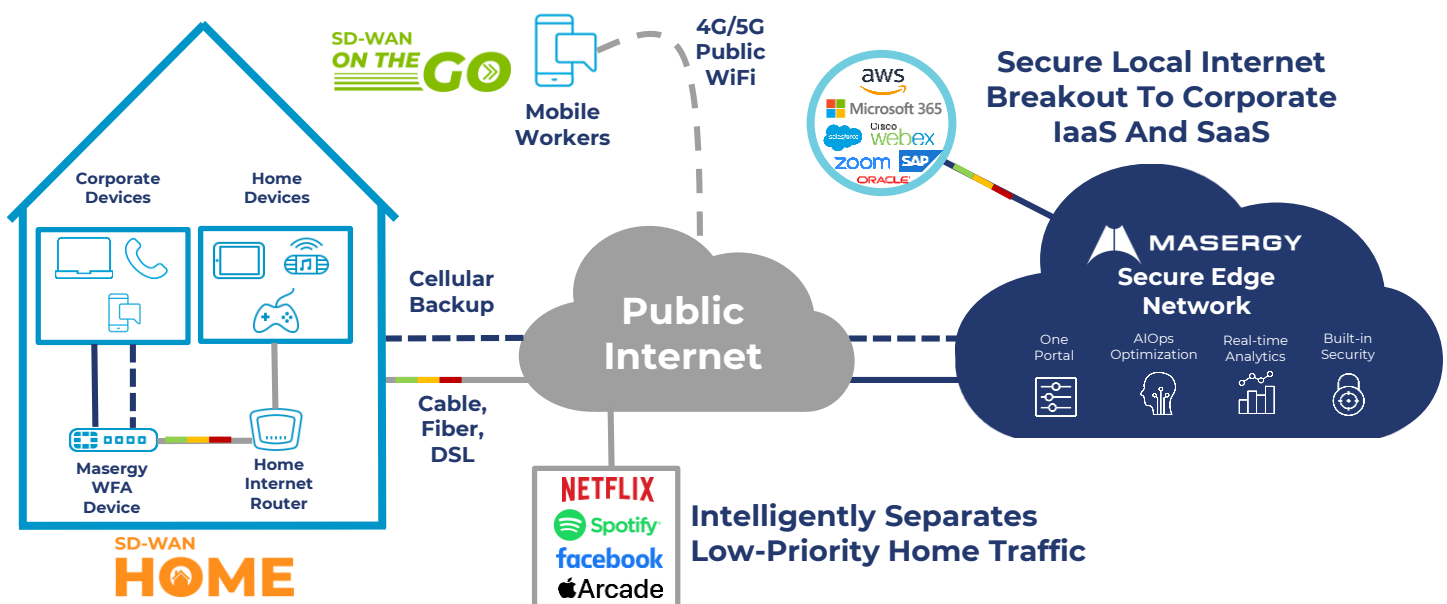

## Features

- Extend corporate WAN access to employee-owned and corporate-owned devices quickly and easily for the mobile workforce
- Establish secure access using VPNs with IPsec tunnels and next-gen endpoint protection
- Enable a SASE-based approach to security with location- and identity-based access

## Benefits

- Easy configuration for IT managers
- Scalable, secure mobility for all workers
- Low total cost of ownership (TCO)

## True Work From Anywhere Flexibility
